CITY COUNCIL AGENDA SUMMARY

City of Mill Creek, Washington

AGENDA ITEM: GROWTH MANAGEMENT ACT PLANNING/POPULATION GROWTH

PROPOSED MOTION:

None. Presentation and City Council discussion only.

KEY FACTS AND INFORMATION SUMMARY:

At the February 4 City Council meeting, staff presented the proposed Vision Statement for the Mill Creek Boulevard Subarea Plan. The Vision Statement is important as it will be used by the Planning Advisory Committee (PAC) to formulate the following three land use scenarios:

- Baseline (no land use changes; only Public Works improvements)
- Some intensity of residential/commercial
- Another intensity of residential/commercial

During the discussion about whether or not the desire for residential units in the subarea should be included in the Vision Statement, the topic of population targets that will be used for the 2023 County and the City Comprehensive Plan update was raised and no action was taken on the Vision Statement. At the meeting, staff suggested that it might be helpful to provide Council with information on several topics related to growth, before we bring the Vision Statement back to the Council for consideration. This information will provide background and context for the Council in reviewing information related to the Mill Creek Boulevard Subarea Study, which is underway, as well as the 2023 Comprehensive Plan update.

In addition to tonight's meeting, three more meetings are planned over the next several weeks to provide information relative to the Mill Creek Boulevard Subarea Plan:

- On March 10th, Snohomish County staff will make a presentations on (1) the results of their Sound Transit 3 Station Area Planning for the future light rail stops planned along Interstate 5 approximately at 164th Street and 128th Street, and (2) the East West Corridor Study.
- On March 24th, OTAK and staff will provide current economic/market information about the Mill Creek Boulevard Subarea compared to the economic conditions that were present for the development of the Mill Creek Town Center. In addition, estimates of economic costs and benefits of more intense development in the Mill Creek Boulevard Subarea will be presented.
- On April 7th, staff will bring the Vision Statement back to the City Council for consideration so direction can be provided to the PAC.

City Council Agenda Summary Page 2

The subject of tonight's presentation is the overall Growth Management Act (GMA) Planning Framework and how the population targets will be assigned to the jurisdictions in Snohomish County. The City will also present information on the capacity for existing population in the City under the current Comprehensive Plan and Zoning and the City's existing housing type mix. Steve Toy, Principle Demographer for Snohomish County, will assist in the presentation.

Agenda Item #_____ Meeting Date: March 3rd, 2020

CITY COUNCIL AGENDA SUMMARY

City of Mill Creek, Washington

AGENDA ITEM: PAVEMENT ASSESSMENT PROFESSIONAL SERVICES CONTRACT

PROPOSED MOTION:

Authorize the City Manager to execute a contract for professional services with Infrastructure Management Services (IMS), Inc. for surveying and rating the City's pavement network in an amount not to exceed \$35,835.

KEY FACTS AND INFORMATION SUMMARY:

The City is responsible for approximately 106 lane miles of roadway. The total lane miles can be broken down into the following classifications:

- 77 lane miles of residential streets
- 19 lane mile of collector streets
- 10 lane miles of arterial streets

An industry standard way of assessing pavement conditions is by assigning a pavement condition index (PCI) to roadway segments. The PCI is a numerical indicator that rates the surface condition of the pavement. As identified in the City's Comprehensive Plan, level of service guidelines for pavement management identifies a minimum PCI of 65 for collectors and arterial roadways and 70 for local and residential roadways. City records indicate that the last pavement condition assessment was performed was in 2012. The City does not have any current data that accurately indicates what the current pavement condition index is for City roads.

In August 2019, staff contacted three consultants from the Municipal Research and Services Center (MRSC) consultant roster soliciting Request for Qualifications (RFQs) for surveying, rating, and providing PCIs for all roads within city limits. Infrastructure Management Services submitted an RFQ and staff contacted references from other public agencies that utilize IMS for pavement assessment services.

A summary of the scope of services include (Attachment A):

- Confirm roadways that will be surveyed, review data on previous roadway segments and data collection strategy
- Review City's current Geographic Information System (GIS) layers
- Review City roadway network attributes including: road names, widths, and lengths
- Mobilize survey equipment and crew
- Collect American Society for Testing and Materials (ASTM) rated data for

distresses and other pavement attributes. Field data collection occurs with specialized vans that are equipped with instruments that measure pavement distresses. Pavement conditions will be measured using standard AST- D6433 (Standard Practice for Roads and Parking Lots PCI Surveys). This standard is commonly used in Washington State and particularly, in the Puget Sound Area.

 Process field data and develop pavement condition scores, create GIS shapefiles and Key Markup Language (KML) files for mapping purposes

The pavement conditions are measured and collected with a van (equipped with lasers, cameras, distance measuring equipment, accelerometers, etc.) that will drive all the roads within the City. Pavement ratings will be summarized in an Excel spreadsheet that has been engineered to utilize core metrics of a comprehensive pavement management system that includes: performance curves, ASTM D6433 distress protocols, repair prioritization, and cost benefit optimization. The use of this spreadsheet will enable the City to manage the collection of pavement condition data for future years without the use of specialized pavement management software packages. However, if it is determined that a specialized software package is required to manage the pavement condition data, this Excel spreadsheet allows the data to be exported to a dedicated software platform. Additionally, this spreadsheet can be used to import the pavement condition data into GIS software.

As indicated in the 2019-2024 Capital Improvement Plan (Attachment B), this assessment and pavement condition rating will be conducted to establish a priority list for future pavement repairs, overlay projects, and allow for coordination of surface water infrastructure, utility work and private development projects.

The schedule of work is as follows:

- Field data collection April 2020
- Field data processing June 2020
- Completed analysis and written report complete End of August 2020

AGENDA ITEM #E.

Project Schedule for Professional Services

To:	Matthew Feely, Supervising Engineer	Date:	February 25, 2020
From:	Jim Tourek, West Region Client Services Mgr.	Project:	Mill Creek, WA
Subject:	Pavement Condition Survey & Analysis Project	Project No:	

Proposed Project Schedule

The approximated duration for the City of Mill Creek field surveys are estimated at **3 days** for the RST testing. This will encompass 48 centerline miles of city maintained roads; with the 2-pass testing of all of the Arterials & Collectors (single-pass of Locals), the total **test miles is 58**.

IMS has the available staff, equipment, and resources to manage a timely project for the City of Mill Creek. IMS will commence the RST field surveys in late-March or early-April. With a not-to-exceed 2 months to process the RST data, we will deliver condition data for review by June. The analysis would then be completed over the next 4 weeks or by end of July, followed by a written report in August of 2020.

Transportation Project

STRATEGIC PRIORITY

Community Preservation

DESCRIPTION / JUSTIFICATION

The City is responsible for approximately 106 lane miles of roadway. The goal of this annual program is to extend the useful life of the City's streets by assessing, preserving and rehabiliting pavement conditions. Typical work will include crack filling, removal and replacement of failed pavement, patching, surface preservation treatments (where appropriate for the type of application, options include seal coat, slurry seal, microsurfacing, chip seals) and asphalt overlays. It is understood that chip seal is not desired for Mill Creek neighborhoods. Pavement preservation options outside of an overlay would first be discussed with the City Council prior to bid and award. The Program includes replacement or installation of accessible curb ramps to meet the requirements of the Americans with Disabilities Act (ADA). Per the Comprehensive Plan, the City's level of service guidelines for pavement ranagement identifies a minimim pavement condition index of 65 for collectors and arterial roadways and 70 for local and residential roadways. In 2019, an assessment and pavement rating will be conducted to establish a priority list for future repairs. Federally funded roadway preservation projects are programmed in 2019 (Seattle Hill Road) and 2021 (35th Ave. SE).
