Date: September 5, 2018

Re: City of Mill Creek – Storm Pipe Repair Program Prioritization

1.0 INTRODUCTION

The City of Mill Creek has obtained CCTV recordings of stormwater pipes in the City between 2012 and 2018. Perteet has reviewed the entirety of available video to assess the condition of those pipes 18-inch in diameter or larger. Large pipes were selected for review due to the increased damage potential of a pipe failure. Each pipe fault was graded for severity on an A through F scale. F grade faults are the most severe, recommended for repair within one (1) year. C- grade faults are recommended for repair within ten (10) years. Grade A faults are not expected to impact the longevity of the pipe. Perteet created planning level estimates of the costs associated with each repair totaling \$4,058,500, of which \$661,300 is for F grade faults. In cases where a pipe run has four (4) or more faults, replacement of the entire run has been recommended. Planning level estimates do not quantify all construction work items, but count only the core work elements and utilize contingencies to represent risk and unknowns. Important data, such as pipe depth, proximity to other structures, and quality of the soil will have a significant impact on costs, and will be available at later stages of design. Actual construction costs will vary, but the planning level estimates provide an order of magnitude cost for the work and a basis to compare recommended repairs.

There are twenty (20) F grade repairs and 137 C- grade repairs. Of the F level repairs, six (6) are assumed to be caused by another utility or to be the result of illicit discharge. For these six (6) pipes, cost recovery may be possible. This memo will recommend a repair program based on a series of criteria described in Section 2 below. A citywide map showing the locations of the F grade faults and the boundaries of Perteet's recommended surface water program is included in the Appendix.

MEMORANDUM

2.0 CRITERIA

2.1 Grade F Faults

F grade faults are recommended for repair within one (1) year. Perteet, in cooperation with City staff, selected a series of criteria with which to prioritize pipe repairs for the urgent F grade faults. The following criteria will be used to bundle pipe repair projects as part of a citywide stormwater refurbishment program. The maps used in this analysis can be found in the Appendix.

1. Catastrophic damage
 - Pipe is ruptured such that stormwater comes into direct contact with soil.
2. Fault in an easement adjacent to private property.
 - Pipe failure threatens resident safety and property.
3. Within one (1) quarter mile of a sensitive wetland or steep slope.
 - Seeks to avoid environmental damage.
 - Steep slope erosion could have severe impacts on safety and property.
4. Failure would obstruct access to critical infrastructure (ex. Fire, Police, School).
 - Seeks to maintain core City functions.
5. Failure would occur on an arterial or major collector.
 - Possibility of grant funding.
 - Failure could cause long term closure of key infrastructure.
6. Pipe size (prioritize larger pipes).
7. Date of discovery (prioritize faults discovered in past years).

2.2 Grade C- Faults

C- grade faults are recommended for repair within ten (10) years. These repairs will be bundled based on the year of discovery and the region of the city. The City of Mill Creek obtained pipe video data beginning in 2012 and continuing through 2018. In order to meet the ten-year recommendation, any pipes discovered to have a C- fault in 2012 need to be repaired by 2022. A fault discovered in 2014 would need to be repaired by 2024, and so on. Thus, repair packages will first consider the year of discovery.

To minimize neighborhood disturbance, bundles will attempt to encompass geographic regions of the city so repairs can take place within a limited timeframe. This type of bundling will also facilitate coordination with any pavement rehabilitation program that may exist. Bundles that match with a pavement repair program should be synchronized to avoid performing destructive pipe repairs in new pavement. At the time of this writing, CIP information is not available. It is recommended that these priorities be adjusted to match future pavement preservation programs.

3.0 METHODOLOGY

3.1 Grade F Faults

F grade faults are recommended for repair within one (1) year. These pipes were given priority over C- grade faults. Each criterion was applied to each F grade fault in sequence. The results can be found in the table in Section 4.0. A fault location that meets criterion number 1 will be prioritized above a fault location that meets criterions 2 through 5. A fault location may meet multiple criteria, in which case a fault location that meets the most criteria will be given priority. If two (2) or more faults meet the same criterion and meet the same total number of criteria, the faults will be compared by the second and successive criteria levels until they can be differentiated. If, after this process has been completed, two (2) or more faults are found to be equivalent, or meet none of the prioritization criteria, they will be ranked by pipe size and year of discovery.

Project costs come from Perteet's planning level estimates. See the Storm Drain Video Observations Memorandum (September 5, 2018) for detailed cost breakdowns.

3.2 Grade C- Faults

Pipe faults graded C- have been sorted by year of discovery, then grouped by neighborhood in Section 5.0. Neighborhoods were simplified to encompass regions of the city. To complete the repairs in the prescribed 10-year window, a yearly budget of between approximately \$500,000 and \$650,000 will be required in the next CIP. The bundling found in Section 6.0 divides the prioritized list into groups of geographically proximate locations with roughly similar budget amounts. See the Storm Drain Video Observations Memorandum (September 5, 2018) for detailed cost breakdowns. The costs found in Section 6.0 are escalated based on the recommended year of constructions.

MEMORANDUM

4.0 F-LEVEL FAULT PRIORITIZATION

The table below shows the prioritized list of critical repairs in Mill Creek. Note, some F faults fall outside the criteria areas and are prioritized only by pipe size and year of discovery. See the program map in the Appendix for locations.

Table 4.1. F-Level Fault Prioritization.

Fault ID* (in order of priority)	Catastrophic	Private Property	Critical Area	Critical Infrastructure	Arterial or Collector	Pipe Size (inches)	Year of Discovery
2332-01**	X	X				18	2014

MEMORANDUM

6.0 BUNDLING

The bundling shown below reflects the grouping of prioritized repairs listed above. F grade repairs are grouped into preliminary bid packages. Note, it is recommended that the repairs be fully designed before final bid packages are established. The bundles for C- fault repairs are organized by neighborhood and have differing values, but average about \$600,000 per year. Neighborhood groupings were given precedence over equivalent dollar values.

Table 6.1. F Repair Bundling.

Description	Repairs	Bundle Total*
Mill Creek Boulevard and Spot Repairs	5270-01, 4655-01, 4853-01, 3693-02, 4859-04, 4847-03	\$240,500
Remaining Large Pipes	640-01, 3168-03, , 3205-03, 3987-01, 3988-01, 2332-01, 2215-02, 2229-09, 4408-01, 2412-01, 1565-01, 2152-01, 2417-03, 3185-01	\$420,800

*For a detailed breakdown of repairs and costs, see the Appendix.

Table 6.2. C- Repair Bundling.

Program Year	Neighborhoods Covered	Bundle Total*
2020	Heatherwood, Heatherstone, Huckleberry, Springtree, Douglas Fir	\$600,100
2021	Evergreen, Vine Maple (North of 142nd Street SE, East of 20th Drive SE)	\$496,600
2022	Vine Maple (South of 142nd Street SE, West of 20th Drive SE)	\$602,400
2023	Business District North and Outfalls	\$636,100
2024	Business District South, Brighton, Northeast, Amberleigh	\$585,800
2025	Trillium Boulevard	\$606,800
2026	Northwest, Southeast	\$608,100

*For a detailed breakdown of repairs and costs, see the Appendix.

7.0 RECOMMENDATIONS

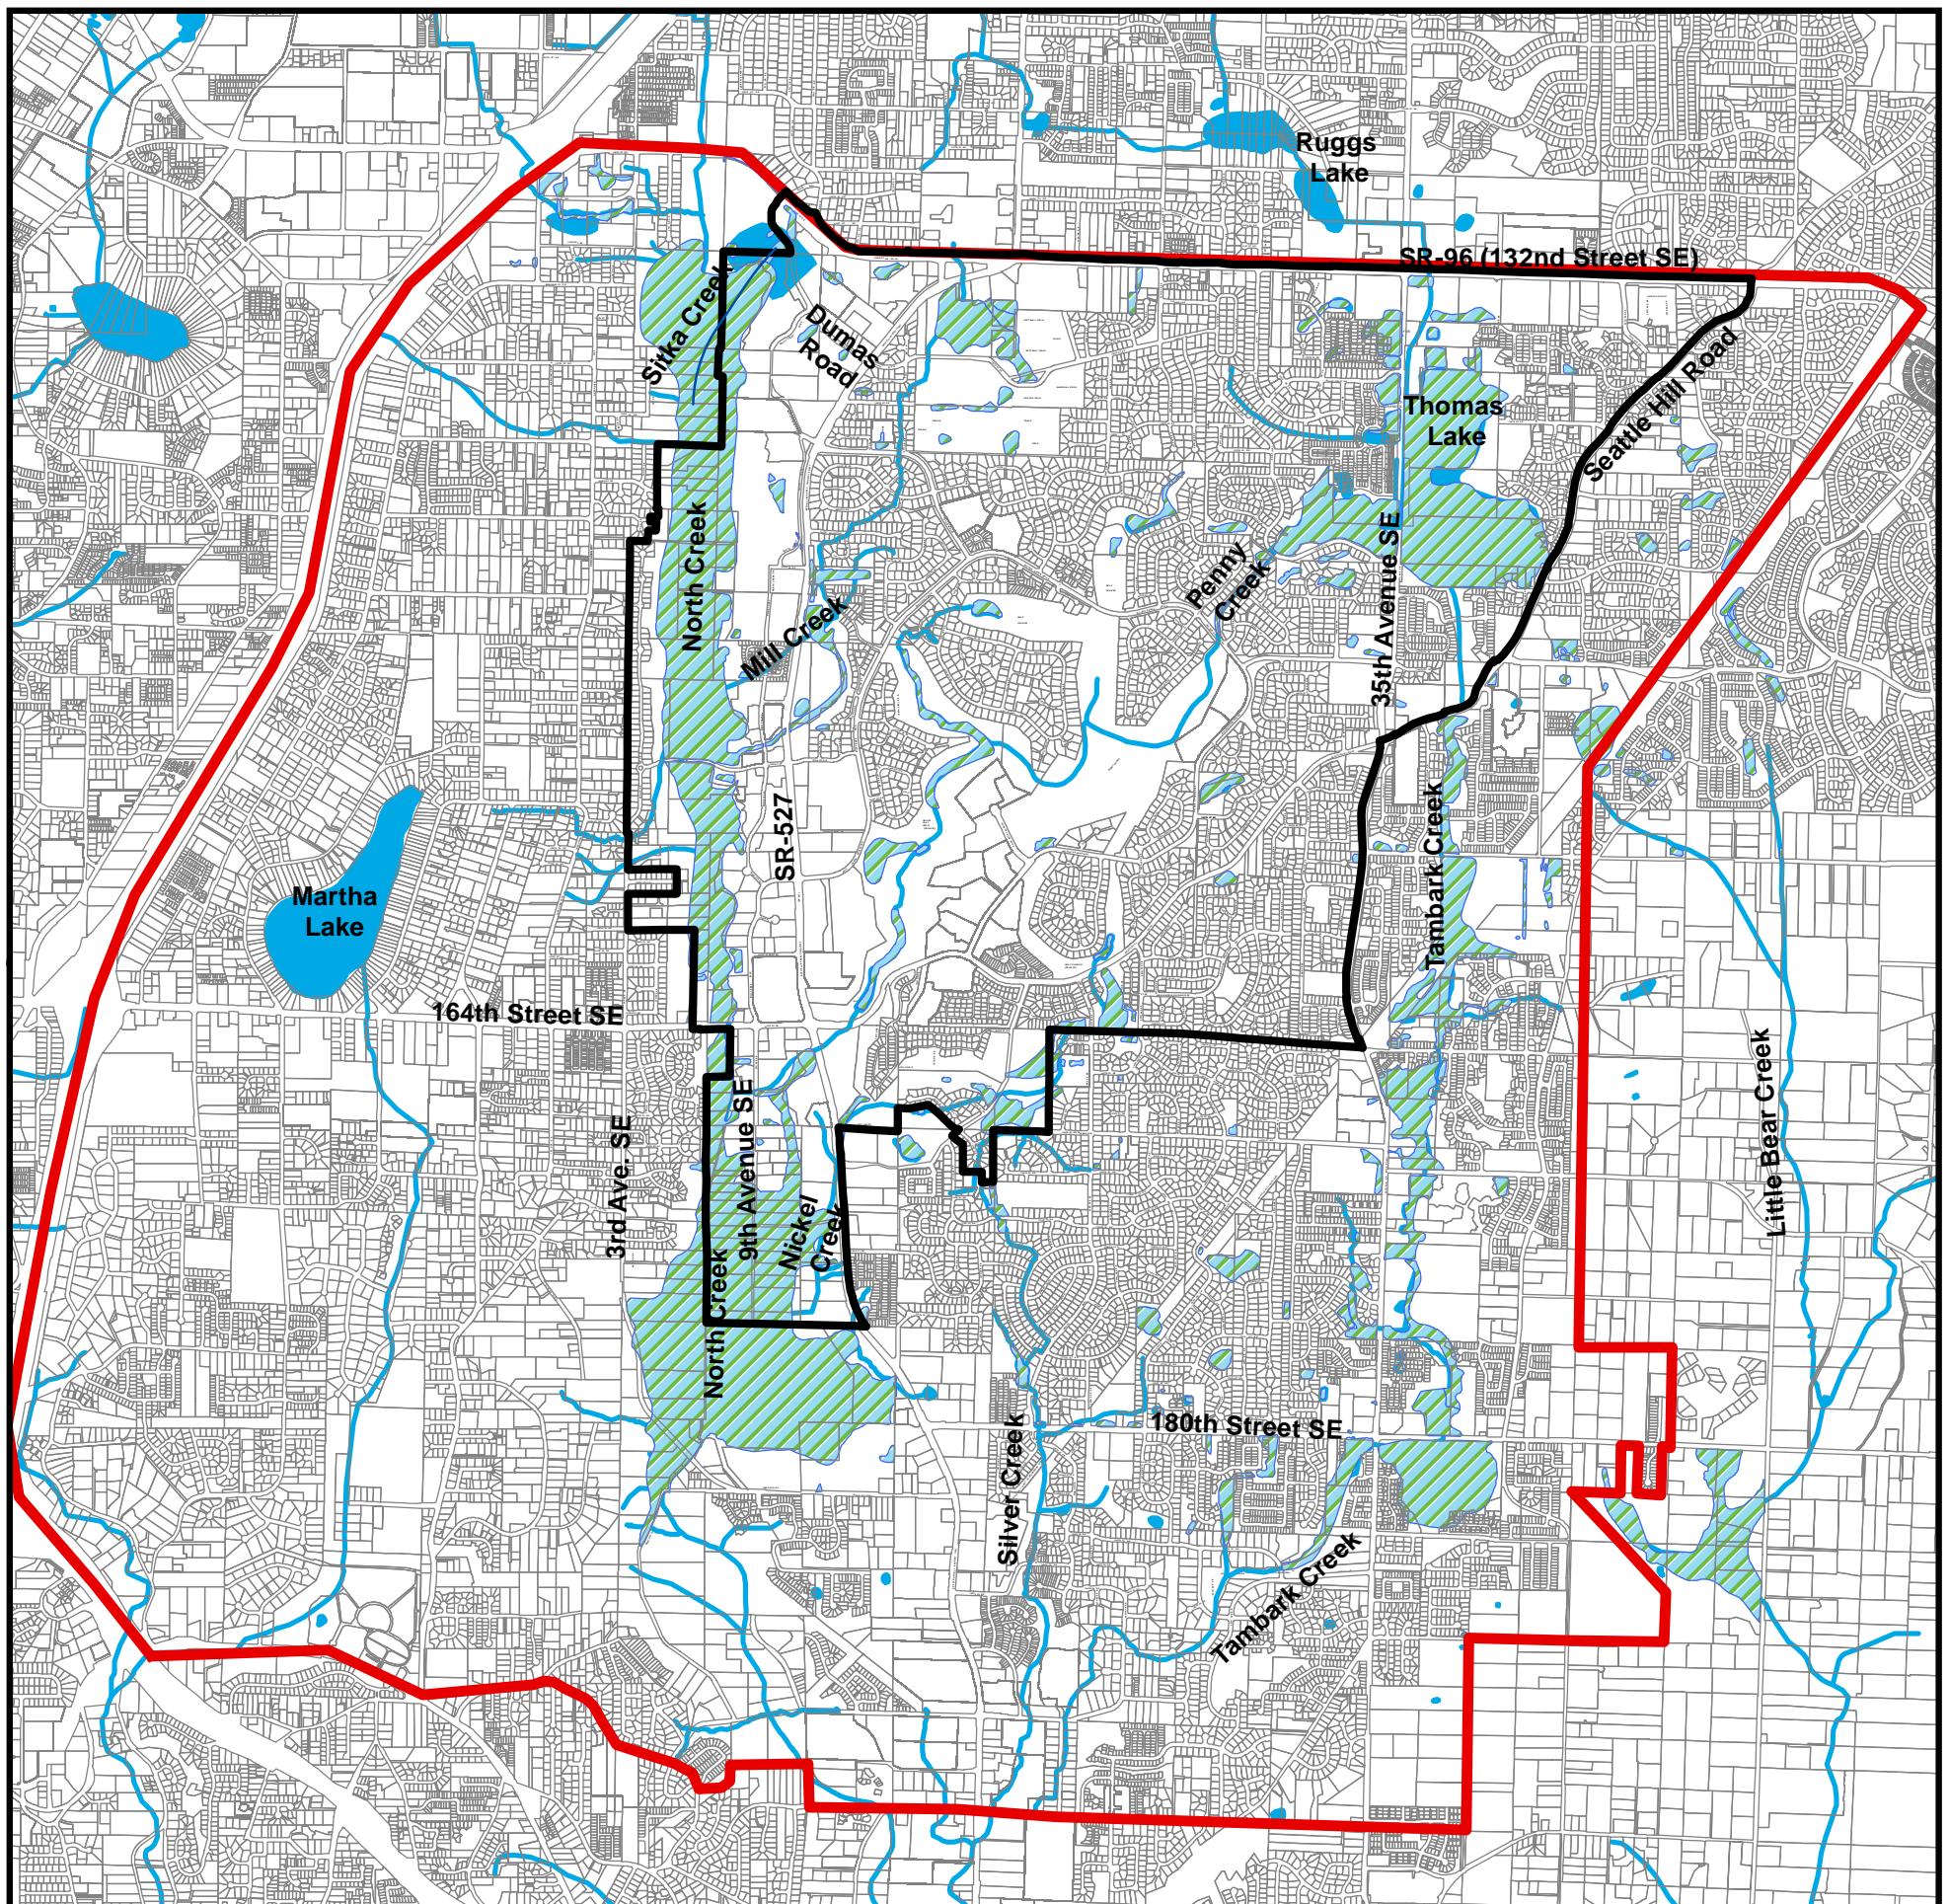

It is recommended that all grade F faults be repaired within one (1) year and that all grade C- faults be repaired within ten (10) years. This plan prioritizes pipe faults of most pressing concern and for which failure could result in risk to safety and property serious disruption to City functions.

For faults that should be repaired within ten (10) years, we have proposed a seven-year plan for future CIP's. A yearly allocation of \$600,000 is recommended for surface water infrastructure rehabilitation. These packages prioritize faults by date of discovery, then by region of the City. Adhering to this plan will result in all C- faults being repaired within ten (10) years of their discovery.

It should be further noted that only 18 inches and larger pipes were assessed for this analysis. The City manages approximately 264,000 linear feet (LF) of storm pipe, of which about 216,480 LF is pipes 15 inches and smaller in diameter. In a previous Perteet review of 12-inch stormwater pipes in the Wildflower and Mill Park Village neighborhoods, several faults were identified. While these pipes were not graded in the same way as the larger pipes, several faults that would qualify as F were observed. It is recommended that these pipes be assessed as well.
